

Eduroam Wireless Network

The eduroam service is a worldwide wireless network access system that allows students, faculty, and staff from participating universities to access wireless Internet at other participating institutions. For example, UTHSCSA affiliates can use the eduroam wireless network at UT Austin, at Virginia Tech, or at any other participating universities. All you need is an Internet-capable computer or mobile device, and your university credentials. UTHSCSA affiliates will use jdoe@win.uthscsa.edu format to login at participating institutions. The use of Eduroam on visiting campuses does not allow you to access internal Health Science Center resources, if you require access to internal HCS resources you will need to connect using the Global Protect VPN client. UTHSCSA affiliates cannot access eduroam while on the UTHSCSA campus. To see all of the places you can connect to the eduroam wireless network or to verify that your institution participates, see the [eduroam-US Institutions](#) page.

Is eduroam secure?

Yes, eduroam is a secure network. eduroam takes the same security precautions as other HSC networks, including the use of the 802.1x authentication mechanism.

Visitors to UT Health Science Center San Antonio

The eduroam wireless network is provided to visitors from other participating institutions at your own risk and with no guarantee that the service will be available at any time or that it will suit any purpose. You are bound to your home institutions acceptable use policy.

If your [home institution](#) participates with eduroam, contact your home institution for instructions, configuration settings, and support.
