How To: Install KACE Agent for Windows OS

1. Double click ampagent.msi to launch the KACE agent installation.

2. The installer will open and display a message stating that it will install the KACE agent. Click Next to continue.

3. In the Server Name text box, verify that kace1000.v102.nc.uthscsa.edu is listed and click Next. If it is not listed, type it in and then click Next.
4. Click Install. A new window will pop up showing the installation progress.

5. If a User Account Control window pops up, click Yes. The installation will continue. It should take less than a minute.

6. A new window will open stating that the installation has completed.
