Determining Computer Name and/or IP address-Mac OSX

Computer Name

A. Make sure you have the fully qualified name and IP address for the remote computer

Navigate to **System Preferences**

Click the Apple icon at top left corner of the screen

Select “System Preferences” from the drop menu

Click on “Sharing” under the “Internet & Wireless” section. The **Computer Name** is displayed.
Determining the IP Address – Mac OSX

From Finder, select the Go drop menu then select Utilities (CMD+SHIFT+U)

Find and run Network Utility

Under the Info tab, select your active Ethernet Connection from the list of network interfaces.

Look under Interface Information for the IP Address:
